

UNIFIED SECURITY MANAGEMENT

Management Platform

One platform for video, access control, plate recognition and communications.

BUILT ON

Genetec Security Center

Omnicast

Synergis

AutoVu

Sipelia

Arpyan builds its solutions on Genetec Security Center, an open-architecture platform that brings every security system of a site into one operator interface: one map, one alarm list, one set of reports. As an official Genetec solution provider, we design, configure and commission the platform around the way your control room actually works.

4 in 1

Video, access control, ALPR and SIP communications in a single platform

Open

Works with cameras, controllers, readers and intercoms from many manufacturers

1 to n sites

From a single server to federated multi-site operations

WHAT IT DELIVERS

Unified operation

Operators handle video, doors, plates and calls from one client. An event in one system brings up the related cameras, cardholder and map position.

Open architecture

Devices are chosen for the job, not dictated by the software. Existing equipment can often be kept and new technology added later.

Scales with the project

Start with one building and grow to a campus or a national network. Federation joins independent systems into one supervised view.

Built to stay up

Directory failover, redundant archiving and health monitoring keep the system running and warn you before a fault becomes an outage.

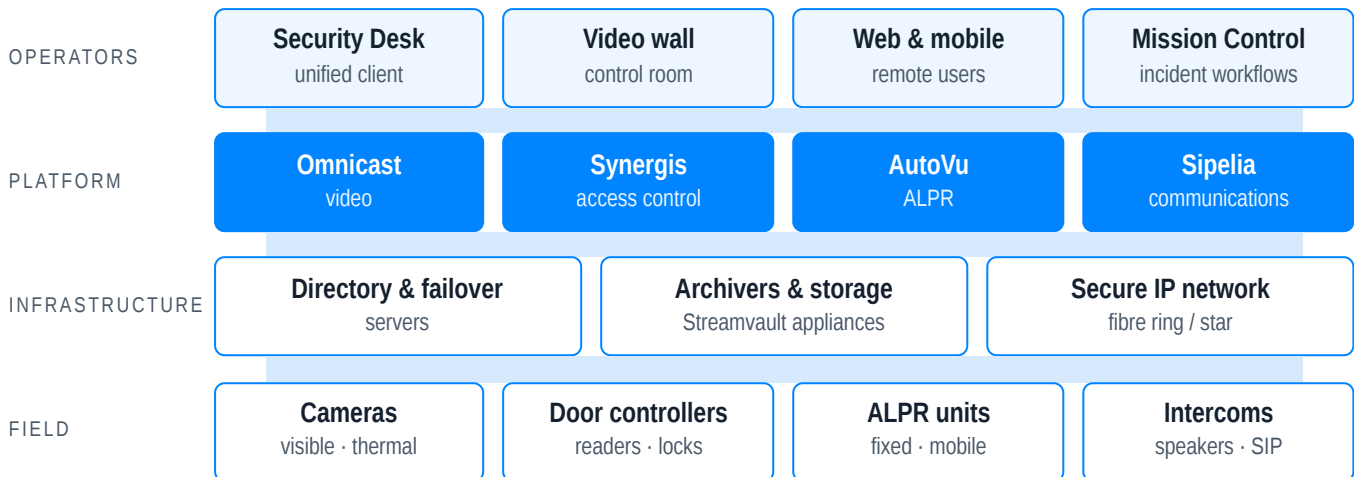

Secure by design

Encrypted communications, strong authentication and detailed user privileges, with privacy tools such as dynamic masking of people in video.

Guided response

Event-to-action rules, threat levels and Mission Control workflows lead operators through each incident with consistent, documented steps.

SOLUTION ARCHITECTURE

PLATFORM MODULES

Omnicast Video management	Live view, playback and archiving for multi-vendor cameras, with analytics, privacy masking and redundancy.
Synergis Access control	Cardholders, doors, schedules and rules on open controller hardware, with every door event linked to video.
AutoVu Plate recognition	Fixed and mobile ALPR for vehicle gates, parking and hotlist alerts, matched against permits and cardholders.
Sipelia Communications	SIP calls between operators, intercoms and phones, paging to speakers and trunks to the site telephone system.
Mission Control Decision support	Qualifies incoming events into incidents and guides the operator through approved procedures.
Plan Manager Interactive maps	Site plans and GIS maps showing devices, alarms and live status, with direct control from the map.

TYPICAL APPLICATIONS

- Critical infrastructure
- Transport hubs and stadiums
- Retail and mixed-use developments
- Cultural heritage sites
- Government and justice facilities
- Resorts and hospitality
- Industry and energy

COMBINES WITH

Surveillance · Access Control · Intercom · Public Address · Early Fire Detection · Drones & Robots

HOW ARPYAN DELIVERS

1 Design

Requirements, coverage and architecture studies, specifications and bills of quantities.

2 Supply

Equipment, software and licences from the manufacturers, with their full warranty.

3 Commission

Platform configuration, guidance of the installer on site, testing and hand-over.

4 Support

Operator and administrator training, documentation and ongoing technical support.
